DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on January 7, 2005 disclaiming the terminal portion of any patent granted on this application, which would extend beyond the expiration date of 6,357,890 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

The indicated allowability of claims 56-59 and 68-71 is withdrawn in view of the newly discovered reference(s) to Schwartz inv Tabor. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 2875

Claims 48-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swartz (US 3,259,428) in view of Tabor (US 5,386,351).

Regarding claim 48, Swartz ('428) discloses a miniature flashlight having a light source 26 having a first lead; second lead extending therefrom and a power source 37 having a first and second side. A housing 34, including a first cover 22, second 23 and a switch 30 operable to closes a circuit of the flashlight (figure 7).

Regarding claim 49, Swartz shows in figure 2 how the first and second cover is adjacent the power source on opposing sides of the power source.

Regarding claim 50, Swartz in figure 2 that the first and second covers have a generally flat shape in cross section that generally parallels a flatted cross section of the power source in an elongated direction of the flashlight.

Regarding claim 53, column 2, and lines 16-31 teaches that the housing and side's covers can be made of any material.

Regarding claim 48, Swartz does not disclose the light source being a light emitting diode.

Regarding claim 48, Tabor ('351) discloses a flashlight having first and second cover 14, 16, a light emitting diode 24 having first lead 26 and second lead 28, a power supply being that of a battery 20 located between both leads of the light emitting diode.

Regarding claims 51, 52 and 54-59, neither Swartz nor Tabor discloses the side covers having different colors, marking or indicia.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to add markings or indicia to the sides or surface, since it has been

held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin, 125 USPQ 416.*

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the flashlight of Swartz having the first and second side covers with the flashlight having a light emitting diode in order to provide a flashlight that is light weight and have a light source that will last a longer amount of time over that of conventional incandescent lamps.

Claims 60-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swartz (US 3,259,428) in view of Tabor (US 5,386,351).

Regarding claim 60, Swartz ('428) discloses a miniature flashlight having a light source 26 having a first lead; second lead extending therefrom and a power source 37 having a first and second side. A power source frame 34, including a first cover 22, second 23 and a switch 30 operable to closes a circuit of the flashlight (figure 7).

Regarding claim 61, Swartz shows in figure 2 how the first and second cover is adjacent the power source on opposing sides of the power source.

Regarding claim 62, Swartz in figure 2 that the first and second covers have a generally flat shape in cross section that generally parallels a flatted cross section of the power source in an elongated direction of the flashlight.

Regarding claim 65, column 2, and lines 16-31 teaches that the housing and side's covers can be made of any material.

Art Unit: 2875

Regarding claim 60, Swartz does not disclose the light source being a light emitting diode.

Regarding claim 60, Tabor ('351) discloses a flashlight having first and second cover 14, 16, a light emitting diode 24 having first lead 26 and second lead 28, a power supply being that of a battery 20 located between both leads of the light emitting diode.

Regarding claims 63, 64 and 66-71, neither Swartz nor Tabor discloses the side covers having different colors, marking or indicia.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to add markings or indicia to the sides or surface, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin, 125 USPQ 416.*

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the flashlight of Swartz having the first and second side covers with the flashlight having a light emitting diode in order to provide a flashlight that is light weight and have a light source that will last a longer amount of time over that of conventional incandescent lamps.

Claim 72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swartz (US 3,259,428) in view of Tabor (US 5,386,351).

Regarding claim 72 Swartz ('428) discloses a miniature flashlight having a light source 26 having a first lead; second lead extending therefrom and a power source 37

Art Unit: 2875

having a first and second side. A housing 34, including a first cover 22, second 23 and a switch 30 operable to closes a circuit of the flashlight (figure 7).

Swartz shows in figure 2 that the first and second covers have a generally flat shape in cross section that generally parallels a flatted cross section of the power source in an elongated direction of the flashlight.

Regarding claim 72, Swartz does not disclose the light source being a light emitting diode.

Regarding claims 72, neither Swartz nor Tabor discloses the side covers having different colors.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide different color on each surface, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin,* 125 USPQ 416.

Regarding claim 72, Tabor ('351) discloses a flashlight having first and second cover 14, 16, a light emitting diode 24 having first lead 26 and second lead 28, a power supply being that of a battery 20 located between both leads of the light emitting diode.

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the flashlight of Swartz having the first and second side covers with the flashlight having a light emitting diode in order to provide a flashlight that is light weight and have a light source that will last a longer amount of time over that of conventional incandescent lamps.

Art Unit: 2875

Claims 73-77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swartz (US 3,259,428) in view of Tabor (US 5,386,351).

Regarding claim 73 Swartz ('428) discloses a miniature flashlight having a light source 26 having a first lead; second lead extending therefrom and a power source 37 having a first and second side. A housing 34, including a first cover 22, second 23 and a switch 30 operable to closes a circuit of the flashlight (figure 7).

Regarding claim 74 and 75, Swartz shows in figure 2 that the first and second covers have a generally flat shape in cross section that generally parallels a flatted cross section of the power source in an elongated direction of the flashlight.

Regarding claim 73, Swartz does not disclose the light source being a light emitting diode.

Regarding claims 76 and 77, neither Swartz nor Tabor discloses the side covers having different colors.

Regarding claim 73, Tabor ('351) discloses a flashlight having first and second cover 14, 16, a light emitting diode 24 having first lead 26 and second lead 28, a power supply being that of a battery 20 located between both leads of the light emitting diode.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide different color on each surface, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Art Unit: 2875

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the flashlight of Swartz having the first and second side covers with the flashlight having a light emitting diode in order to provide a flashlight that is light weight and have a light source that will last a longer amount of time over that of conventional incandescent lamps.

Response to Arguments

Applicant's arguments with respect to claims 49-77 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. Ward whose telephone number is 571-272-2386. The examiner can normally be reached on Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on 571-272-2378. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
